2. Configure Audience and Customer Segmentation

As a Nimbus Super User, I want to define the intended audience for each notification, so that notifications are only delivered to relevant Nimbus users.

Preconditions

• A Notification Definition exists.

• Customer and user information required for segmentation is available in Salesforce.

Business Requirements

BR1: Audience configuration must support geographical segmentation, including Global, Region and Country.

BR2: Plant or service-area segmentation should be supported where the underlying customer data allows it.

BR3: Audience configuration must support role-based segmentation, such as Manager, Purchaser or other available Nimbus

roles.

BR4: Audience configuration must support sales-channel segmentation, including Direct and Indirect customers.

BR5: Notification eligibility must consider the Nimbus applications available to the user.

BR6: The framework must support Account, Location and Contact-level recipient logic where required.

BR7: Users with access to multiple relevant locations or accounts must be considered when the recipient population is calculated.

BR8: Related and delegated account access must be considered where it affects the eligible recipient population.

BR9: Segmentation rules must apply to both automatic and manual notifications.

Acceptance Criteria

AC1

Given a notification has an audience configuration

When recipients are resolved

Then only users matching all applicable segmentation criteria are selected.

AC2

Given a notification is associated with a specific Nimbus application

When recipients are resolved

Then users without access to that application are excluded.

AC3

Given a user has access to multiple eligible locations

When an event occurs for one of those locations

Then the user can be identified as an eligible recipient for that location.

AC4

Given geographical, role-based and sales-channel criteria are combined

When the audience is calculated

Then the system applies the configured criteria together to determine the final recipient population.

AC5

Given a notification is configured for a specific country or region

When the audience is resolved

Then users outside the configured geography are excluded.

AC6

Given a notification is configured for a specific role

When the audience is resolved

Then only eligible users matching that role are included.

AC7

Given a notification is scoped to Direct or Indirect customers

When the audience is resolved

Then only users associated with the configured sales channel are included.
