5. Manage Notification preferences in Nimbus

As a Nimbus user, I want to access a Notification Settings area in Nimbus, so that I can control which optional notifications I

receive and through which available channel.

Preconditions

• User is authenticated in Nimbus.

• Notification Definitions applicable to the user exist.

Business Requirements

BR1: Notification Settings should be accessible from the user's Nimbus profile or settings area.

BR2: Users should only see notification options relevant to applications they can access.

BR3: Preferences should support Bell and Email independently where both channels are available.

BR4: Optional notifications may be enabled or disabled by the user.

BR5: Mandatory notifications cannot be disabled.

BR6: Preferences must be stored at the Contact level using a scalable related object rather than individual checkbox fields directly on Contact.

BR7: A preference must relate the Contact to the applicable Notification Definition.

BR8: For the MVP, a Contact preference applies across the locations or accounts that the user is entitled to access.

BR9: Per-location preference management may be considered separately if required.

BR10: The notification trigger must check the user's saved preference before an optional notification is delivered.

Acceptance Criteria

AC1

Given the user opens Notification Settings

When the settings are displayed

Then the user sees only notification options applicable to their Nimbus access.

AC2

Given an optional notification supports Bell and Email

When the user updates their settings

Then the user's Bell and Email preferences are stored.

AC3

Given the user has opted out of an optional notification or channel

When that notification is triggered

Then it is not delivered through the disabled channel.

AC4

Given a notification is mandatory

When the user opens Notification Settings

Then the applicable mandatory option cannot be disabled.

AC5

Given the user saves notification preferences

When the user leaves and later returns to Nimbus

Then the saved preferences remain applied.

AC6

Given the user loses access to a Nimbus application

When Notification Settings are displayed

Then notification options belonging only to that inaccessible application are no longer shown.

AC7

Given a preference change is saved

When a future optional notification is processed

Then the most recently saved preference is used during delivery evaluation.
